

STUDIOPACK

UKRAINE LIMITED

NATIONAL MANUFACTURER
OF ALUMINIUM FOIL AND CARTON TRAYS

2022

Ukrainian production

ABOUT US

StudioPack group is the first national manufacturer of environmentally friendly disposable food trays made of aluminum foil in Ukraine. StudioPack Ukraine company started its way in 2006 as a distribution company, but, by 2010, had changed its status to the exclusive national manufacturer of alimentary aluminium foil trays. The manufacturing facilities are equipped with the latest high-tech equipment and meet all international standards of production of food packaging. Products of StudioPack group are used by numerous enterprises in bread, meat, confectionery industries, HoReCa segment enterprises, national and regional retail chains.

QUALITY STANDARDS

The words "StudioPack group" are the synonymous of the European quality, environmental safety and the technologies of tomorrow. The proof of this is successful audit of the company and obtaining TUV NORD certificates for ISO international centralized management

- quality management system ISO 9001:2015;
- management system in the food safety in accordance with ISO 14001;
- environmental management system in accordance with ISO 22000:2018.

All products have the required Ukrainian sanitary certificates as well as the standard EN 602 "Aluminium alloys intended for contact with food products".

HYGIENIC SPECIFICATIONS

Food trays made of aluminum foil gets 100% sterile and turns into a barrier and anti-bacterial material that allows preserving and protecting the products packaged in a tray of alimentary aluminium foil from any outside influences. The foil has no taste or smell: so, there is no risk for the product to take over the taste of the packaging material.

The trays are covered with the food-grade coating SOFTENOL 3829 that complies with the European standards EN 602.

MULTI-FUNCTIONALITY

The food in aluminum trays can be warmed up and cooked in convection or microwave ovens and, due to the good thermal conductivity of aluminum, the food is heated and baked through evenly, does not stick and does not change its shape. Aluminium foil trays are impact-resistant and easily tolerate a wide temperature range (-25°C to +230°C) which the foods are exposed to during cooking and freezing without a risk of package cracking, melting, charring or flame formation.

LIGHT WEIGHT AND SPACE SAVING

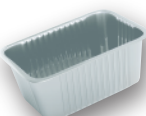

There is significant economy of space in transporting and storing dishes made of alimentary aluminium foil due to their light weight and ability to be tightly packed together.

100% RECYCLABILITY

Aluminum foil trays prevents products deterioration and allows saving energy and materials. Furthermore, aluminum trays can be repeatedly recycled without losing quality with just a little electricity consumption.

Product groups

	Groups	Application	Compatibility with microwave oven	Temperature range	Lid
	Wrinkled trays	For industry, HoReCa, retail network and home use	Yes* **	-25°C to +300°C	Cardboard lids, OPS lids, PET performed lids
	Smoothwall trays	For industry, HoReCa, retail network and home use	Yes* **	-25°C to +300°C	Cardboard lids, OPS lids, PET performed lids
	Consumer packs	For industry, HoReCa, retail network and home use	Yes* **	-25°C to +300°C	Cardboard lids, OPS lids, PET performed lids
	Carton trays	For industry, retail network and home use	Yes* **	-25°C to +50°C	Self-closing

* do not use in microwave ovens manufactured before 1981.

* remove the lid before use in microwave oven.

Smoothwall trays

Pieces per
carton

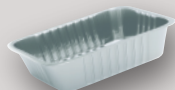

Smoothwall trays are made of a foil with thickness of 100-130 microns, the additional strength is achieved by the special design - the smoothed curves, hard edges and ribs. Aluminum alloy components are selected so that the tray retains its shape from the moment of filling with products to supermarket display cases and, further, a microwave oven of the final consumer. The smoothwall trays can also be used for shock freezing or cooling any products (the food-grade foil easily tolerates cold), they are ideal for vacuum packaging with MAD. All the way from the manufacturer to the consumer's dinner table is made by the product in the same package.

THE RIGHT WAY TO DO IT

The lid must be removed from the trays before use

The meal should cover most of the bottom of trays

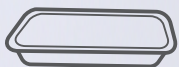

Place the aluminium tray in the middle of the turntable in the microwave oven.

Attention: If the microwave oven is equipped with a metal turntable, please place ceramic or glass plate beneath the tray.

The aluminium tray must not come into contact with the wall of the microwave oven

(Minimum distance to the wall: 2 cm.)

Only one aluminium tray may be used in the microwave oven tray at a time
